ABSTRACT

This artwork has a unique name, " Δt ," which combines the Greek letter delta (Δ) representing a small increment in mathematics and physics, and the initial letter of "Thickness." This work : Δt -Sphere is part of the Δt series, and was born out of a study of the monement of living creatures. The principles of elasticity and pendulum is

used by penetrating a piano wire through a stack of thin acrylic plates.

The theme of this artwork is "Floating Liquid Encased in a Sphere." Through the organic fluctuations originating from artificial objects, I aim to provide an opportunity for people to recognize that the relationship between nature and artificiality is not separate, but rather by designing physical phenomena at a microscopic level, we can seamlessly experience natural elements like liquid.

Participants can manipulate a sphere that sways in response to their hand movements, creating a sensation as if they were generating wind with the palm of their hands. Moreover, they can control the floating liquid within the sphere, which reflects LED lights, giving them an illusion of becoming a deity or a sorcerer.

In today's chaotic and unpredictable society, this work has the power to harmonize even complex events under a designed law

Permission to make digital or hard copies of part or all of this work for personal or classroom use is granted without fee provided that copies are not made or distributed for profit or commercial advantage and that copies bear this notice and the full citation on the first page. through the power of combination of art and science. The man-made objects are the crystallization of human wisdom while the liquid, which is swaying like a wave as a metaphor of this artwork, is a source of all things. The " Δt -Sphere" is a work that gives interactivity to the beauty of the fusion and harmony of natural and man-made objects, and can give people a new perspective.
