2 DESCRIPTION OF ARTWORK

In SIGGRAPH 2000 I debuted my piece Wooden Mirror. Over the past 23 years I have been expanding my series of Mechanical Mirrors to include tens of pieces utilizing various materials and techniques to examine the creation and perception of images and computer graphic concepts in a physical, interactive manner. Recently I have introduced color to my Mechanical Mirrors, the piece RGB Peg Mirror is my first piece that reproduces a full color reflection of the viewer by mechanically controlling 1555 motorized Red, Green, Blue aluminum pegs. I thought it would be appropriate to show this milestone piece where the series began. RGB Peg Mirror has two modes of operation and those change every two minutes: The first mode is the interactive reflective mode where the viewer is reflected on the piece in real time. The second mode is the generative mode, in this mode the piece displays various animations that were designed to take advantage of the colorful/ dynamic nature of the piece.

3 ARTIST INFORMATION

For nearly three decades, Daniel Rozin's practice has investigated the structure and materiality of images. From mosaics to digital images comprising pixels, discrete components are assembled to make a whole. Employing a range of materials—from trash to hand fans. Past exhibitions of his work include the Reina Sofia National Museum, Madrid; Victoria and Albert Museum, London; The Garage CCC, Moscow; ICC Center, Tokyo, The Israel Museum, Sundance Film Festival and more.

Permission to make digital or hard copies of part or all of this work for personal or classroom use is granted without fee provided that copies are not made or distributed for profit or commercial advantage and that copies bear this notice and the full citation on the first page. Copyrights for third-party components of this work must be honored. For all other uses, contact the owner/author(s).
