ABSTRACT

This immersive and interactive experience for OCULUS QUEST 2 allows the visitor to observe in real size six masterpieces of sculpture iconic from five periods of history, following an imaginary and poetic journey enriched by numerous media.

1 CULTURAL AND EDUCATIONAL CHARACTER OF THE PROJECT

This VR experience benefits from the know-how of the Réunion des musées nationaux - Grand Palais (a.k.a RMN-GP) both in digital mediation of the multimedia department and the expertise of the photo agency in 3D modeling.

Permission to make digital or hard copies of part or all of this work for personal or classroom use is granted without fee provided that copies are not made or distributed for profit or commercial advantage and that copies bear this notice and the full citation on the first page. Copyrights for third-party components of this work must be honored. For all other uses, contact the owner/author(s).

The RMN-GP has long been committed to a policy of educational and digital projects. In particular, with the Ministry of Culture and the Ministry of National Education, it has edited the History through Image site for over 15 years. She has also created the Panorama de l'art online site since 2011. These two sites attracted nearly 4.5 million visitors in 2020 according to Anne-Lise Guinchard, Multimedia project manager at RMN-GP. All these projects aim to disseminate knowledge of the history of art and of History to the greatest number.

Since 2013, the RMN-GP Photographic Agency has set up a 3-dimensional digitization project of works of art. The Photographic Agency has produced models in more than 12 national museums and established agreements with the main museums.

This project is proposed within the framework of the partnership agreement for museum and cultural innovation between the RMN-GP and the Agrandisseur Fisheye. The RMN-GP and the Agrandisseur Fisheye have already experimented with a terminal connected with Komito around the "The Moon" exhibition and organized an event under the Nave of the Grand Palais with Spotr, a participatory mobile application. The Fisheye Magnifier aims to spark entrepreneurship in the cultural sector. This accelerator is also designed as a place to share experiences, knowledge and expertise between startups.

Coming back to the project, it fits perfectly with the objectives of the RMN-GP, namely to disseminate knowledge of the History of Art and History to as many people as possible, and in particular

to our target. , an adult audience, especially 18-30 year olds who know sculpture in general but not necessarily the anecdotes around the masterpieces accessible in this experience.

2 THE ARTWORK

The visitor appears in the middle of a star-shaped structure, an introductory video starts to explain him what to do. At the end of each branch is a 3D sculpture made from photogrammetry. With his hands, which are transcribed in the virtual universe, he can choose to go to any direction. Halfway, the visitor can consult a video on how to understand and look at a sculpture. Arrived in front of the chosen sculpture, the visitor listens to an explanatory text which helps him to get to know this masterpiece better. He also has the opportunity to view images behind the 3D model.

The visual universe was marked by a strong idea: to bring together a faithful volumetric representation of the sculptures with a decoration that is not the reproduction of an existing place, we imagined a place floating in space, beyond our earth. Is your gaze on the horizon on a half-open hull, inner walls of a vessel within which the structure appears to be levitating ? Enjoy our virtual tour through time and space.

3 THE TECHNOLOGIES

The first choice is to create a VR experience. We are convinced of the value of this technology, especially in a period when making a

place virtually (or works) accessible that is physically inaccessible to the public takes on its full meaning.

The second choice is that of photogrammetry applied to VR. We are also convinced that creating virtual experiences through a technique that makes the experience more and more real is a winning choice made by ArtofCorner almost 6 years ago.

The third technical choice is to want to bring a VR experience under OCULUS QUEST 2. We have seen the hardware evolution of VR headsets and the OCULUS QUEST 2 standalone headset is to date the best VR headset on the market in terms of quality / performance ratio. price and also the best-selling VR headset in the world, according to SuperDATA. It is therefore on this headset that we choose to create our content in order to reach the general public internationally with strong and promising subjects.

Our final technical choice is to bring this VR experience online with the VRCHAT social VR environment:

Why we decide to Join VRChat ? VRChat offers an endless collection of social VR experiences by giving the power of creation to its community. Whether you're looking for new VR experiences or have an idea of your own, VRChat is the place to be to interact with people all over the world.
