1 Abstract

Creating 3D digital content has been a tough challenge, especially when dealing with scenes packed with objects or characters performing complex motions. With Tripo Doodle, we can now rapidly prototype entire scenes and fully animatable characters, with nothing more than simple doodles and text prompts. The AI-generated assets are high-quality and ready to be used across a range of applications—from gaming and animation to immersive virtual experiences and beyond. This technology opens the door to new creative possibilities, making 3D content creation faster and more accessible than ever before.
