ABSTRACT

This work "indefinitely" tells the epitome of the earth and future urban pollution. In contemporary society, high walls have been built between people, and people living in cities are basically replicas. We use VR technology to create a surreal world in VR helmets, focusing on spiritual pollution and environmental pollution. In this ambiguous world, how can people find themselves in the bustling maze of nothingness? Through the three scenes of tomb forest, acid rain wasteland and hazy village, the experimenter uses the handle to understand human diseases, disasters and pollution in the past[Ypsilanti et al. 2018]. They also picked up the photo fragments of "Lucas" representing hope and felt the fear of being lost in the spiritual maze. In this scene, they become poor people who are lost and polluted in their souls. At the end of the scene, the experimenter found a door full of hope, picked up all the fragments of Lucas, took a group photo of Lucas and his daughter before departure, and ended the journey.

CCS CONCEPTS

• **Human-centered computing** → Virtual reality; • **Applied computing** → Media arts.

1 INTRODUCTION

The work "Indefinitely" tells the epitome of pollution of the earth and future cities. In contemporary society, high walls have been built between people, and people living in cities are essentially copies. The future high-tech society is likely to develop in an extreme direction: the future world will bring double pollution to the environment and soul [Guy 2018]. This work is a VR interactive work, which contains three scenes in total: grave forest, acid rain wasteland and uninhabited village (see Figure 1). The switching of the three scenes takes the story fragments of the mouse "Lucas" as a clue. The experimenter also collects the story fragments of the mouse

Figure 1: <Indefinite>: Experience scenes (a) Scene 1:Grave forest. (b) Scene 2:Acid rain wasteland.(c) Scene 3:A village without people

"Lucas" while passing through these three scenes, and finally puts together a piece of Lucas and his daughter. A group photo while fleeing, and get the story of Lucas and his family who lost their lives because of environmental pollution and escaped. The interaction method in the work is simple and direct, and the experimenter can switch scenes, pick up fragments and some simple interactions with objects in the scene through the handle.

2 INDEFINITELY

Wilderness experience who pass through the forest, and acid rain, fog, haze village three scenarios into the game experience, fixed scene order, from forest to acid rain wasteland to empty grave village into a city, experience can move freely in the scene, the whole process of interaction for "handle press" is selected, this interaction also accord with people's normal cognition. The action is simple and effective, which increases the operability of the interaction.

2.1 Scence1: Grave forest

The first scene to enter the experience is: the Grave forest, where there are flying bats, creatures that have mutated due to pollution, the smog flooding the entire forest, and the acid rain from morning to night. The experimenter will hear the wailing of bats, and continue to walk forward. A tall forest of tombs comes into view. Use the handle to click on the tomb. A line of words will appear above the tomb and the voice of the deceased will be heard: Thomas died in the fog Haze, respiratory tract infection and death...Most people in future cities will die from cancer and other diseases caused by environmental pollution. Experiencers can roam freely in the space, and they can teleport to the next scene when they reach the teleportation point. There are also story fragments about "Lucas" above the teleportation point. The fragments will be picked up automatically when teleporting.

2.2 Scence2: Acid rain wasteland

The second scene is the acid rain wasteland. In this wasteland, no normal life will grow because of acid rain. Red acid rain gathers into a river. There is no drinkable water here. Countless lives have died because of the scorching sun and polluted air here. The experimenter uses the handle to click on the rock. The rock records the message of

the deceased and makes a sound: Is there water? Please help me! In the same way, the experienter collects "Lucas" story fragment 2 and enters the next scene through the teleportation point (see Figure 2).

2.3 Scence3: A village without people

The third and final scene is an uninhabited village. The wind carrying pollutants continues to blow through the village. The village once burned many people due to fires caused by industrial production. They turned into corpses and stood on the street. Hideous. The rest of the village fled, leaving only a group of hungry bats wailing in the air. Experienters crossing the streets of the village

can see many red warning signs: Watch out for bats! They can eat people when they are hungry! The experienter can walk freely in the scene through the handle, the whole environment is dim, until the experienter walks into a lighted cabin, the light of the cabin will attract the experienter to enter, in this room, there is the last story of Lucas Fragment 3, click "Patch the Fragments" Lucas's story is also unfolded to the experienter: Lucas the mouse took his daughter to escape on this polluted earth, they have died due to lung infection caused by environmental pollution. Countless lives died on this earth, they killed each other, the earth was polluted by the environment, and the soul of life was also seriously polluted. The VR experience is also completed.

3 SUMMARY

This clue through "Lucas" life for people with experience to experience earth pollution and the epitome of the future city, and in pollution, we set about heart, environmental pollution under the contemporary society, between people build a generous and tall fence, we hope that through vr interactive games, let the participants explore life and future relationship, Arouse the audience's concern about society and human beings themselves.
