1 Description

Narwhal Studios' presentation provides a comprehensive exploration of the art of directing for virtual production and ICFVFX, featuring insights into both AAA productions and smaller projects. Led by Narwhal's CEO and Creative Director, Felix Jorge, along with Studio Art Director Safari Sosebee and Sr. Real-time Artist Dallas Drapeau, this discussion promises valuable perspectives.

Drawing from Narwhals extensive background in visualization and virtual production, including work on renowned IPs like 'The Star Wars Universe' and Netflix's 'Avatar: The Last Airbender,' the team will present insightful case studies. These studies will illustrate how real-time engines and virtual production workflows enhance the creative process during pre-production, highlighting both large-scale projects like 'Avatar: The Last Airbender' and smaller productions, using their personal project Siegfried as an illustrative example.

Netflix's 'Avatar: The Last Airbender' is a prime example that illustrates the intricacies of managing large-scale productions, with Narwhal's team crafting numerous virtual sets using Unreal Engine. The session will delve into the collaborative efforts between directors, production designers, and VFX supervisors to realize their vision through innovative real-time approaches.

On the other hand, Narwhal Studios 'Siegfried' exemplifies how the team efficiently repurposed digital assets from a video game to produce a compelling live-action short film on an LED stage. This smaller-scale project demonstrates practical applications of leveraging existing assets from gaming environments in film production.

Overall, Narwhal Studios' presentation offers a cohesive exploration of the transformative impact of virtual production tools on filmmaking workflows, drawing on their diverse experiences across various projects.
