1 Overview

When building upon a beloved franchise like Zootopia, the artists of Walt Disney Animation Studios had to consider every detail that makes the world unique and its characters memorable. By combining the famous bunny and fox duo with a herd of new animated animals and environments, artists developed new rules and techniques to expand the world in genuine and exciting ways.

In this session, the “Zootopia 2” leadership team will take you on a wild journey through the film’s worldbuilding. They will explore what it took to visualize marshes, mountains, deserts, and tundra, and discuss the development of new characters like Gary De’Snake and the Lynxley family. They will also share new workflows and tools throughout the discussion that allowed for collaboration across multiple departments, and enabled the crew to tackle an adventurous and expansive body of work.
