1 DESCRIPTION OF ARTWORK

Spambots explores questions around AI and industrial farming. AI is increasingly used to generate spam content. Spambots explores what would happen if, instead, machine learning was used

to empower a group of robotic Spam cans to tell their tales. Each Spambot has a small keyboard with four letters on it and when they collaborate they are able to type the whole alphabet along with some punctuation. The text they are typing is generated by a neural network fine-tuned on a version of Aldous Huxley's *Brave New World* where occasional words have been swapped out for pig-related ones. In this novel each character is born into a role in much the same way industrial farm animals, such as those that end up in Spam, are born into their fate.
