Abstract

Neural MONOBLOC Black is a series of 8 furniture pieces generated directly in 3D with a custom fine-tuned (dreambooth) prolificDreamer model and fabricated in an artisanal way with 100% upcycled wood. It expresses the notorious 'Janus problem' of non-3D-aware text-to-3D generative models as a continuous form of becoming and mirroring.

of digital artificial intelligence and physical artisanal intuition, inviting everyone to critically reconsider the status quo. The Neural MONOBLOC Black is thus about the ambiguous, generative, and continuous becoming of all possible monobloc chairs.

1 DESCRIPTION OF ARTWORK

Neural MONOBLOC Black is a series of 8 furniture pieces generated directly in 3D with a custom fine-tuned (via dreambooth) prolificDreamer model and fabricated in an artisanal way with 100% upcycled wood. The white plastic Monobloc chair is the world's most widely produced and disposed chair, yet it is also one that has come to epitomise the mass consumption of unsustainable, cheap, fast, and homogenous design. The project turns the Monobloc on its head by undermining the very notions of optimised machine production and human consumption through the subversive aesthetics
