From Image to 3D in Seconds: High-Fidelity Asset Generation

Bottlenecks Today

Representation → inefficient

Fidelity → limited detail

Speed → minutes

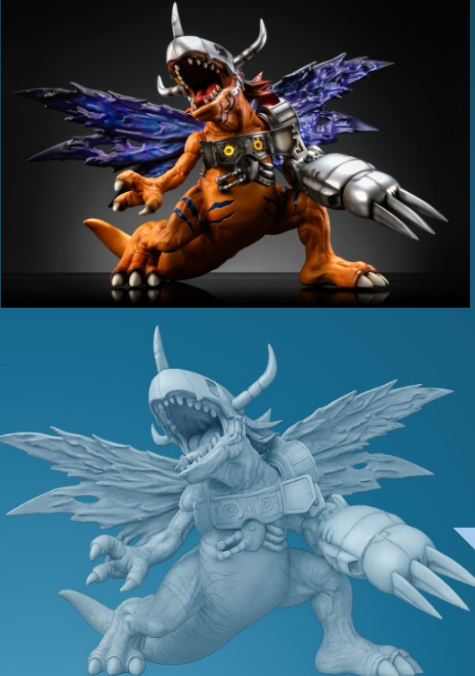

Our Breakthrough

Efficient discrete mesh codec

Novel generative architecture

Acceleration algorithms

Leading Text-to-3D generation in ~20s!

1 Overview

The SparcAI team developed a next-generation 3D generative model that pushes the boundaries of fidelity and speed. Our new system

produces native-resolution geometry with exceptional structural detail, supports native material and texture generation, and achieves fast generation within seconds. Built upon an efficient discrete mesh codec and a novel generative architecture, the model delivers unmatched realism and responsiveness—enabling creation of

highfidelity 3D assets directly from images or text prompts. This breakthrough greatly advances cinematic-quality 3D asset generation toward real-world applications.
