ABSTRACT

In Japan, we have religious meditation training to stare at one place called “AJIKAN.” This real-time live performance reveals the technical and cultural connection between the Brain Control Interface and AJIKAN. During the performance, the system lets the performer click a preferred location on a computer screen at which they need to stare during the performance. Then, the Brain Control Interface device from NextMind can steadily read the brain activity, and the system renders the information in real time. It connects the latest technologies and creativity in the fields, including live performance, installation, art, and XR.
