Abstract

The HCI Across Borders (HCIXB) workshop at CHI 2025 will focus on "Building a Collective Vision for the Future." HCIXB has gathered a diverse audience annually by conducting workshops and symposia since CHI 2016. This year, we hope to regroup as a community to reflect on the growth of HCIXB over the past ten years, engage in mentoring sessions for present early career researchers, and collectively form a vision for the future. This full-day hybrid workshop aims to gather researchers and practitioners to explore how we can collectively shape the future of HCI across diverse cultures and geographies. We will have a panel discussion featuring invited speakers sharing insights from a recent HCIXB Book Chapter summarizing our future. Attendees will showcase their research through posters, highlighting HCIXB's trends worldwide, particularly in the Global South. Lastly, we will collaborate to create a vision for our community's future and provide initial resources to future HCIXB organizers.

1 Introduction

HCI Across Borders (HCIXB) is a global community of HCI researchers and practitioners that has grown organically over the last decade. Our community's goal has been to invite and support participation from students and early career researchers in the CHI community through a series of events across the globe. These events have shaped our community through conversations and collaborations that expanded our vision by having a global and culturally diverse member group. For example, our first event

was a development consortium in CHI 2016 [16], where many of the researchers identified their work as HCI4D work. To date, our conversations about expanding our vision led us to adopt the umbrella term *HCI Across Borders*. Since then, we have met every year at CHI to strengthen our community and expand our concept of borders. Our community has grown to over 700 members, many of whom have met regularly at CHI [3, 8, 9, 15, 16, 18, 20]. Over the years we have discussed the shifting challenges in the pandemic in 2022 [8], we've reflected on design challenges stemming from decolonial thinking in 2021 [15], discussed designing for UN's SDG goals 2020 [15], highlighted intersectionally diverse contexts in 2019 [20] and promoted early career mentorship in our earlier years [3, 9, 17, 18].

For CHI 2025, we plan to meet as the HCIXB community in a full-day and hybrid workshop to jointly reflect on the **past**, examine the **present**, and build a collective vision for our **future**. Our initial part of the workshop will include invited speakers to spark discussions on our growth over the last decade. We expect to invite speakers from earlier iterations of HCIXB workshops conducted, such as at CHI 2013 [6] and CHI 2016 [16] to inspire conversations on our community's growth. We also expect to introduce a recent book chapter *Human-Computer Interaction Across Borders: Perspectives from the Global South* [12] that summarizes the growth and current state of our community's research over the last decade. The second part of the workshop will include discussions from early career researchers in the form of poster sessions. These poster sessions are intended to create a channel for participants to share their early-stage work and find mentors and peers who will help them guide their work to publication. Finally, the third part of the workshop will involve consolidating ideas from the past and present through activities and discussions that will allow us to form a collective vision for the future. We also expect to share our experiences running these workshops and nurturing our community in the form of a manual intended to serve as an initial guide for future events.

In preparing for the CHI 2025 workshop, we plan to create hybrid, online, and asynchronous spaces to generate global discussions from our community members before and during the workshop. Although a hybrid space will allow members with travel constraints to participate, we expect that the considerable timezone difference between the current CHI location in Japan and the three continents (America, Europe, and Africa) would call for additional engagement spaces. Therefore, we plan to create online spaces through virtual events that will be participatory and invite discussions from community members before the workshop in Japan. Lastly, we hope to create asynchronous channels through messaging applications (such as Slack, WhatsApp and Discord), allowing inclusive participation from the HCI community. We expect these online and asynchronous spaces to continue after the workshop, sustaining our conversations for the year.

1.1 Workshop Agenda

Through our collective vision, we aim to build on the idea of communal *Ikigai*—(or *IkiCHI*)—where our purposes align to contribute to a greater whole³ [2]. This is particularly relevant in the face of ongoing global disruptions, such as technological upheavals [8], geopolitical conflicts³ [9], and environmental crises [8], which

demand collaborative and interdisciplinary approaches to problem-solving [7, 15]. We hope to expand our vision for the future of HCI by focusing on collective reflections and fostering mentorship for early-career researchers, particularly those from historically underserved academic communities, to pave a collective path forward.

The first agenda item focuses on collectively reflecting on our growth as a community over the last decade (e.g., [12]). The second agenda item aims to bolster existing early career researchers aligned with SIGCHI's goals for providing mentoring opportunities around publications and academic practices [19]. Our final agenda is to jointly form a vision for our community's future and provide initial resources (such as a manual) to equip our participants. The organizers of this workshop are best positioned to carry out this agenda as they are also active contributors on the organizing and steering committees for key global south research spaces (e.g., the AfrCHI [5], CLIHC [10], ICTD [4] and COMPASS [1] conferences).

2 Organizers

We recruited our initial list of organizers from our Facebook group, Discord Server¹, and Slack channel. We list the initial team of volunteers below, in alphabetical order of first name:

Aakash Gautam is an assistant professor in the School of Computing and Information at the University of Pittsburgh. His research focuses on designing socio-technical systems to promote an inclusive and just society, using participatory approaches that empower communities to take incremental steps toward social change. His interests include human-computer interaction (HCI), learning sciences, and community-based participatory action research.

Christian Sturm is a Professor at the Hamm-Lippstadt University of Applied Sciences in Germany. His academic background includes computer science, cognitive psychology, and cultural anthropology. He has worked in academia and industry for several years in Mexico, Spain, and Egypt and taught computer science in China. His research interests include experience in research and design, cross-cultural interactions, and entrepreneurship.

Cuahtémoc Rivera-Loaiza is an associate professor at the Universidad Michoacana de San Nicolás de Hidalgo in Morelia, México. He has been an active member of the HCI communities in México and Latin America for more than twenty years. His research interests are in technology adoption, mobile computing, and education. He is a Co-Chair for Globalization and Inclusion for CHI 2023 and general chair of the Ninth Mexican International Conference on Human-Computer Interaction.

Delvin Varghese is a Research Fellow in Human-Centered Computing at Monash University, Australia. His research is on designing digital technologies for community voice inclusion. He has worked on digital media projects with not-for-profits in Asia, Africa and South America.

Hafeni Mthoko is the co-founder of NurtureID8. She has experience monitoring and evaluating ICTD-related interventions in rural contexts, citizen engagement, and health communicative ecologies. She is interested in identifying innovative ways, including technology, to facilitate meaningful change in African settings. She is particularly interested in exploring mentorship approaches to support aspiring researchers better.

¹<https://discord.com/invite/YJF4nNGH3f>

Laura S. Gaytán-Lugo is a professor at the University of Colima in Mexico, appointed at the School of Mechanical and Electrical Engineering. She focuses on human-computer-interaction, mainly in serious games, to improve children's skills in developing contexts. She serves as Coordinator of the Latin American IHC Community (LAIHC). She is the Co-Coordinator of the Latin American Committee of the ACM SIGCHI. She also participates as Secretary on the direct board of the Mexican Association of Human-Computer Interaction (AmexIHC).

Marisol Wong-Villacres is an Associate Professor at Escuela Superior Politécnica del Litoral in Ecuador. She explores how cultural and learning science theories can inform an assets-based participatory design of technologies that support historically marginalized groups, such as immigrant families from developing regions, in pursuing sustainable, emancipatory transformations.

Sara Moin is a PhD candidate in Computer Science at IIIT-Delhi, in the intersection of human-centered computing and healthcare for development. Her research focuses on developing technologies for women's health, particularly within the Indian context. Currently, she is designing solutions that promote women's advocacy and enhance health literacy regarding intimate health, leveraging interdisciplinary research and human-centered AI to drive meaningful change.

Sarina Till is a PhD student at the University of Cape Town, where she researches human-computer interaction for development.

Susan Dray is President of Dray & Associates, Inc., where she provides contextual and ethnographic user research, usability evaluation, and interface design consultation for a wide range of products, systems, and applications. She contributed to the founding of ACM SIGCHI, was the 2006 recipient of the SIGCHI Lifetime Service Award, and received the SIGCHI Lifetime Achievement in Practice Award in 2015. She is an ACM Distinguished Engineer and a Human Factors and Ergonomics Society Fellow. She is also an ACM Fellow.

Tsuyoshi Kano is an associate professor at Kanazawa Institute of Technology. His research interest is how digital technology can affect economic development in developing countries, known as ICTD and ICT4D. He also focuses on digital human resource development in the Global South.

Vikram Kamath Cannanure is a postdoctoral fellow at Saarland University. His research is on building and evaluating appropriate AI systems for low-resource contexts. He is currently working on exploring the role of Large Language Models for education in the Global South.

3 Website

Our website² will include all information about the 2025 workshop featuring key information along with details about past initiatives. It will include our Call for Participation, submission links, organizer information, and insights into previous HCIXB sessions at CHI. Selected participants will have the opportunity to publish their work in our Medium publication titled *Human-Centered Computing Across Borders*³, to receive asynchronous feedback from the broader HCIXB community. We will also share the final workshop plan and

a summary on the website. All important details, including key dates, will be regularly updated. This site will be a central hub for information leading up to the workshop.

4 Pre-Workshop Plans

To align ourselves with this year's theme, "HCI Across Borders: Building a Collective Vision for the Future," we are committed to promoting our workshop to a global audience. Our publicity efforts will leverage various channels, including mailing lists (such as CHI Announcements and SIGCHI), social media platforms (including LinkedIn and Twitter), and a dedicated Facebook group for the workshop. Additionally, we will recruit volunteers by advertising within our Facebook, Discord, and Slack communities. Our Facebook Group HCI Across Borders⁴ has a large community, with 700 users. We will also recruit participants from other global initiatives within HCI, such as ArabHCI [13], Latin American HCI [14], EduCHI [11], AfriCHI [5], that routinely participate in CHI.

Our organizing team will form a subcommittee responsible for managing submissions, recruiting panelists, handling logistics, and promoting the workshop. We aim to encourage participation from a diverse global audience, particularly from early-career researchers. To support travel for students from the Global South, also referred to as economically developing countries by ACM, we plan to submit a proposal to the SIGCHI Development Fund.

We invite participants to submit completed work, works-in-progress, and provocations. The co-organizers will evaluate submissions for inclusion in the workshop, anticipating a participant count of 20-30 individuals. Selection criteria will include the uniqueness and provocativeness of content, engagement with the workshop themes, and the potential of contributions to this emerging community. All submissions will undergo peer review by at least two experts. If we receive a high volume of submissions, we will assemble a program committee composed of established researchers and scholars of HCI.

5 Workshop Structure

The workshop will be hybrid, allowing in-person and virtual participation and prioritizing online attendance to accommodate those unable to travel to Japan due to sustainability, sovereignty, or inclusivity concerns. While there will be an on-site component, asynchronous participation will be facilitated to accommodate time zone differences. We will allow remote participation through relevant meeting applications (e.g., via Zoom). Relevant materials will be shared with all participants at least three weeks before the workshop. A collaborative Google document and Miro board will allow participants to add notes and comments before, during, and after the workshop, remaining accessible post-event. The document will be outlined in advance to assist with note-taking, and the organizers will oversee logistics such as timekeeping and documentation. Student volunteers will assist with capturing notes, photos, videos, and recordings with participants' consent.

The workshop will be structured into two halves: the first half will focus on discussions about the past and present of HCI in a Global Context: Challenges and Opportunities. In contrast, the

²<http://www.hcixb.org/>

³<https://medium.com/hccxb>

⁴<https://www.facebook.com/groups/hciXb/>

second half will focus on the future, i.e., fostering a dialogue towards a future vision and brainstorming the resources for the next workshops (see Table 1).

The workshop will commence with a welcome greeting, introductions, and workshop agenda, followed by opening remarks that outline the workshop's objectives. We will feature a keynote address on Human-Computer Interaction Across Borders over the last decade" delivered by a prominent speaker from the HCIXB community. After the keynote, there will be a session about the HCIXB Book Chapter *Human-Computer Interaction Across Borders: Perspectives from the Global South* [12], where we'll share a summary and discuss the field's past contributions and latest research. The segue into the "present" will move on to our next agenda item, i.e., our poster sessions highlight the current work by early career researchers in the field.

After a networking lunch, a panel discussion titled "Building a Collective Vision for HCI: Global Collaboration and Future Directions" will discuss the importance of cross-border cooperation in HCI and address future trends, followed by a Q&A session. Following a short break, we will have a session introducing the HCIXB Workshop Manual, which is the collective knowledge of running these workshops over the past 5 years. We expect to improve it through collaboration to provide guidelines for organizing future workshops. The manual sharing session aims to help participants understand these resources and encourage collaboration to continue our events. The workshop will conclude with wrap-up remarks summarizing key insights and encouraging participants to connect during an informal networking session.

By combining presentations, discussions, and networking opportunities, this workshop aims to foster collaboration among researchers, practitioners, and students, ultimately contributing to a more inclusive and diverse vision for the future of HCI.

Time	Activity
20 mins	Welcome from the organizers, introductions, and agenda
30 mins	Keynote Address
45 mins	HCIXB Book Chapter event
15 mins	BREAK
90 mins	Poster Presentations
90 mins	LUNCH
60 mins	Panel on Envisioning the future
15 mins	BREAK
30 mins	HCIXB Manual and planning for future events
15 mins	BREAK
60 mins	Closing and townhall

Table 1: Tentative Agenda for HCIXB 2025

6 Post-Workshop Plans

Following the workshop, a summary of the day's activities will be posted on the workshop website, along with participants' paper submissions and artifacts from collaborative activities. Workshop organizers will also invite participants to contribute to the collaborative development of opportunities for HCI researchers and

explore future directions for HCI Across Borders (HCIXB). These activities will be discussed during the closing session of the day.

7 Call for Participation

HCI Across Borders (HCIXB) is a global community cultivated by over eight years of dedicated efforts to connect research and practitioners from diverse cultures and geographies. It began as the Development Consortium at CHI 2016 and continued with workshops from CHI 2017 to 2022. Today, it has transformed into a collaborative initiative with a unified mission to foster community across various geographies, backgrounds, methodologies, and other boundaries.

The HCIXB workshop at CHI 2025 will provide a distinctive platform to present HCI-related work and initiatives from communities around the world to a global audience. This workshop will emphasize **"Building a Collective Vision for the Future"** at CHI. We aim to collectively reflect on global issues and critically assess the design of technology in this context. We invite participants to share how global challenges have influenced their research, practice, or education and provide a platform to encourage broader participation. The workshop website is at <https://hcixb.org>.

At least one author from an accepted submission must register for the workshop.

8 Submissions

The HCIXB: Building a Collective Vision for the Future workshop aims to foster global collaboration and envision the future of Human-Computer Interaction (HCI), focusing on the Global South. Participants are invited to submit a position paper (300-500 words, single column, PDF format preferred) on hcixb2025.hotcrp.com. reflecting on topics such as HCI trends in different regions, lessons learned from the past decade, and opportunities for the next 20 years. Sub-themes will include envisioning the future of HCI in the Global South, mentoring and educational opportunities for emerging researchers, and strengthening collaborations between attendees. We also encourage diverse submission formats and welcome videos, blog posts, abstracts, or pictorials that offer varied perspectives on this year's theme.

Below are some questions that can help participants reflect on their work and contribute to the broader conversation about HCI's future, particularly in the Global South:

- **Global HCI Trends:** How has your research or practice in HCI been influenced by local, cultural, social, or political contexts, especially in the Global South? What unique challenges and opportunities have emerged from your region?
- **Future of HCI in the Global South:** Envision the role of HCI in the Global South over the next 20 years. What key developments, technologies, or approaches do you foresee as central to this evolution?
- **Collaboration and Community Building:** What strategies do you suggest to strengthen collaboration and community building among HCI researchers across borders, especially in regions with limited resources or representation?
- **Sustaining the HCIXB Community:** How do you envision the HCIXB community growing and sustaining itself over the coming years? What are your ideas for global feeder

events or activities that could contribute to the community's growth?

- **Workshop Impact:** How do you think attending HCIXB 2025 will benefit your work and the communities you (hope to) connect with?
- **Personal introduction:** A brief description about yourself. Please include your department, year of study, organization, etc.

Important Dates

- February 08: All submissions due
- February 25: Participant notifications sent
- April 10: Posters due
- May: HCIXB workshop
