ABSTRACT

This workshop proposes a space for Latin American academics and activists engaging with *data* to think critically about the legitimacy and power dynamics of knowledge production. Given that most research on data, as well as its area of application, have focused on and is informed by the Global North, this workshop sets the spotlight on Latin America and places activist and academic knowledge on equal standing. The organisers are an interdisciplinary group of Latin American scholars and activists, women based in the North and the South, engaging with data across the borderlands of disciplines, practices, migrations, and languages. By hosting the workshop in Spanish (with English interpretation), the organisers aim to create a space where Latin American voices are heard and appreciated, without requiring English proficiency from speakers and participants. We invite the CHI community to cross the borders and join a different conversation, including panels and interactive sessions that will inspire — and challenge — current thinking around data and data practices.

Spanish Version: Este taller propone un espacio para que académicos y activistas latinoamericanos que trabajan con *datos* piensen críticamente en la legitimidad y las dinámicas de poder en la producción de conocimiento. Dado que la mayor parte de las investigaciones sobre datos, así como su área de aplicación, se ha centrado en el Norte Global y ha sido moldeada por éste, este taller pone el foco en América Latina y sitúa el conocimiento activista y académico en igualdad de condiciones. Las organizadoras son

un grupo interdisciplinario de académicas y activistas latinoamericanas, con sede en el Norte y en el Sur, que trabajan con datos a través de las fronteras disciplinarias, las prácticas, las migraciones y los idiomas. Al organizar el taller en español (con interpretación en inglés), las organizadoras se proponen crear un espacio en el que se escuchen y aprecien las voces latinoamericanas, sin exigir a ponentes y participantes que dominen el inglés. Invitamos a la comunidad de CHI a cruzar las fronteras y unirse a una conversación diferente, incluyendo paneles y sesiones interactivas que inspirarán — y desafiarán — ideas en torno a los datos y las prácticas de datos.

CCS CONCEPTS

• **Human-centered computing** → **Collaborative and social computing**.

Crossing Data: Building Bridges with Activist and Academic Practices from and for Latin America (*Cruzar datos: Tendiendo Puentes con Prácticas Activistas y Académicas desde y para América Latina*). In *CHI Conference on Human Factors in Computing Systems Extended Abstracts (CHI '22 Extended Abstracts)*, April 29-May 5, 2022, New Orleans, LA, USA. ACM, New York, NY, USA, 6 pages. <https://doi.org/10.1145/3491101.3505222>

1 INTRODUCTION

In recent years, data have become the primary fuel for contemporary technologies, informing pathways of individual and collective action. Research disciplines such as Human-Computer Interaction (HCI), Computer-Supported Cooperative Work and Social Computing (CSCW), and Critical Data Studies (CDS) have explored the role of human intervention and subjectivity associated with the work practices required to design, create, and work with data.

Researchers [6–8, 18] have explored data as a “human-influenced entity” [12], i.e., the intricacies of designing, creating, and working with data [13, 14]. A series of workshops within the CHI community [3, 4, 10, 11] have fostered interesting conversations on data practices, labor, and power. However, with notable exceptions, much of this research, as well as its area of application, tends to focus on and be informed by the Global North.

With this workshop, we aim to challenge hegemonic knowledge production around data and data practices; first, by moving the spotlight and setting it on Latin America¹ — a region with a long history of activism-led social change — ; second, by placing activist and academic knowledge on equal standing; and third, by hosting the workshop in Spanish with English interpretation, upending the usual dynamic of “English by default”.

The workshop will create a space for Latin American academics and activists engaging with data to debate legitimacy and power dynamics in knowledge production about and with data. We will focus on how critical data studies can be put to work in real-world scenarios and how knowledge from data activism can lead academic research. The activities that we propose for the workshop — which include a panel and interactive sessions — will focus on discussing and critically interrogating existing methods, methodologies, and epistemologies to assess how data are produced by centering the perspectives and practices of Latin American activists and academics.

The organisers of this workshop are an interdisciplinary group of Latin American scholars and activists, women based in the North and the South, engaging with data across the borderlands of disciplines, practices, migrations, and languages. By bringing activism and academia together and focusing on this under-studied and diverse region, we hope to cross the borders and foster rich conversations that serve as inspiration and source of interrogation for the CHI community and beyond.

2 THE LOCALITY OF DATA: A PERSPECTIVE FROM LATIN AMERICA

Latin America, if we take a “view from the North”, is an under-studied region. Few academic studies focus on data practices from/in Latin America and, when they do, they tend to reference literature from the North. This has been extensively addressed by scholars such as Walter Mignolo who calls for a “political and epistemic de-linking” to decolonize how we conceive knowledge to be (re)produced [9]. In a similar vein, knowledge produced from and in the region — epistemologies from the South [16] — struggles to be recognised in mainstream academia, an issue exacerbated by the predominance of English-speaking journals. This dynamic echoes and reproduces other hierarchies and struggles over the legitimacy of knowledge, such as the prevalence of academic production over knowledge “from the ground”, or of data science over feminist DIY

¹We recognize that the region is not a homogeneous whole, holding as it does a huge diversity of peoples, geographies, languages, histories, and practices. We also acknowledge that the name “Latin America” is the product of a violent history of imperialism and colonisation, yet, as Rodríguez [15] proposes, the term has had a successful capacity for interrogating imperial logics and may be worth sustaining the tensions posed by the permanence of the nomination inherited from the colonizer, seen as a potentiality and not as a weakness.

data projects. “Geo-politics of knowledge go hand in hand with geo-politics of knowing”, as Mignolo[9] rightly suggests.

Latin America has a rich history of activism-led social and political change. These span from the popular struggles against US-backed dictatorships in the 1970s, through the indigenous-led resistance to the privatisation of natural resources and the neoliberal encroachment of multinationals, to the more recent successes of the feminist movement, which has seen the legal recognition of femicide/feminicide (gender-related killing of women) across the continent and more countries moving towards decriminalising abortion. Many of these struggles have involved the production, care, and circulation of data by citizens and activists. These include data about disappeared friends and family members, data about pollution, data about gender-related violence or reproductive health.

For example, in Mexico, María Salguero has been mapping feminicides since 2016, to counteract official data. She is one of many individuals and groups mapping and recording cases of femicide across Latin America. Inspired by these activists, and building on the principles of data feminism, Catherine D’Ignazio, in collaboration with Silvana Fumega (from the Latin American Open Data Initiative ILDA) and activist Helena Suárez Val (Feminicidio Uruguay), have gone on to develop Data Against Feminicide, an action-research project to understand and build tools to support these efforts [5].

Another example is the work that DataGénero is doing around missing data and gender. The Observatory created an advocacy campaign to make visible the data gaps in Latin America in four main areas: i) missing data of congress, ii) missing data about trans and non-binary people, iii) missing data of reproductive and sexual rights, iv) missing data about our criminal courts and jury systems.

Similarly, several projects are focusing on the territory and the commons through data collection. For instance, the Colectivo de Geografía Crítica Ecuador works with communities to create cartographies in defence of the territory that critically map tensions and potentials, promoting a geography for resistance.

Using digital tools and technologies as a means to bring history back, “Proyecto Luisa” [17] is a collective effort to transcribe data from the Uruguayan dictatorial and pre-dictatorial period that for various reasons is difficult to transcribe automatically. Although the project is working with machine learning and natural language processing tools, they are also asking people to do it by hand. The project seeks truth and justice about acts of State terrorism.

There are also some South-North collaborations. These include the project by Forensic Architecture on Ayotzinapa, which is an interactive and forensic tool that examines thousands of pieces of evidence of the night of September 26, 2014, when 43 students from the Ayotzinapa Rural Teachers’ College were attacked in the town of Iguala, Guerrero, Mexico.

Lastly, recent research has examined how people adopt social media platforms to collect and exchange information about crimes, as well as to quantify ongoing human-rights crises [1, 2]. The website <https://hoyodecrimen.com> systematizes official data from the Mexican government to geolocate crime in Mexico City with the aim of alerting citizens of perilous areas.

We believe that these unique and diverse experiences and perspectives can be extremely valuable for the international HCI community as they can serve as inspiration to critically examine and

develop data practices across diverse contexts that take into consideration local histories and infrastructures.

3 THE WORKSHOP

This workshop is a space for Latin American academics and activists and CHI community members from all places to exchange knowledge and experiences around data uses and misuses, and to explore synergies and challenges in the relationship between critical data theories and forms of data activism.

We anticipate three main lines of inquiry during our workshop, but depending on the interest of our audience we will focus our activities on specific topics. These lines of inquiry and potential provocations are:

- (1) *Exchange Perspectives on Critical Data and Activism*
 - How can critical perspectives on data fuel activism to push change in key real-world areas such as policymaking and resource allocation?
 - What does it mean to be "critical" when working with data?
 - What does it mean to incorporate critical data theories produced from academia into activist practices of data creation, analysis, and use?
 - How can we open spaces of legitimacy for activist knowledge within the academy?
 - How can academic knowledge be produced from and with — instead of about — data activism?
 - What are the perks and perils of working with data in the quest for social justice and accountability?
- (2) *Bridge Communities of Practice and Knowledge Production*
 - What are commonalities and challenges in the experiences of Latin American activist working with data and what can the HCI community learn from these on-the-ground experiences?
 - What are the needs regarding data usage in activist organizations?
 - Where is the academic critical eye needed?
 - What fields of inquiry have been neglected by academia?
 - How do we produce knowledge that considers local histories and infrastructures and, at the same time, illuminates possible paths for other contexts?
 - Where does the production of activist knowledge take place? In what places does it circulate?
 - How and with whom do we build alliances through data?
- (3) *Learn about a Multiplicity of Data Practices*
 - How do we get to know what we know? How can we make our data accountable?
 - Would the data that we produce or use look different if we were to frame it, as the original etymology of *data* suggests, i.e., as something that is meant 'to give' rather than 'to take'?
 - What are tensions between qualitative and quantitative data paradigms?
 - As data moves across locations and sites of practice, who does the work of data?
 - What can be learned from investigating data practices across contexts?

- How can we design horizontal and non-extractivist research methodologies?
- What infrastructures support data production? Where do they come from?
- How can we resist / challenge hegemonic epistemologies when knowledge production is shaped by infrastructures, platforms, and languages from the Global North?

Due to the ongoing pandemic, visa restrictions, and unequal vaccine distribution around the world, we are proposing a virtual-only workshop to facilitate the participation of members of communities outside of the U.S, especially from Latin America. We are expecting to accommodate up to 35 participants.

To limit the time participants must spend online, both to reduce fatigue and enable a global audience, we will structure the workshop into three phases: pre-workshop, a four-hour synchronous session, and post-workshop activities.

3.1 Pre-Workshop Plans

The following activities will be held with all participants. We will exchange the submissions among participants to get an idea of everyone's perspectives and research scope.

3.1.1 *Biblioteca desde y para el Sur.* We will invite participants to create a collective *biblioteca* (library) desde y para el Sur, including a collaborative list of readings, audiovisual materials, and other resources focused on data and the production of data from the South. This list will be made publicly available on the workshop website at the end of the event. We will invite our participants to contribute with reports, scholarly articles, blogs, videos, podcasts, artistic interventions, and other materials generated from or about Latin America and the Caribbean (and other southern regions) that they consider to have contributed to further our understanding of data and data practices. If available, the organisers will provide English versions of the collected resources.

3.1.2 *Collective Directory.* We will create a directory to connect research communities from different sites of practice, including activism, data journalism, policymaking, and academia. To this end, we will circulate a living document among participants, where they will be able to add their contact information, research interests, and expectations of the workshop. By putting together such a collective directory, we hope to create a space in which academia and activism can exchange knowledge and experiences beyond the proposed workshop.

3.2 Synchronous Workshop Session

The synchronous workshop will run over one day, for up to four hours, including breaks. This session will be hosted online using an accessible conferencing system. Simultaneous English translations will be provided to enable communication with non-Spanish-speaking participants. Below is a detail of the planned structure:

- [10 minutes] **Introduction to workshop topic and overview of schedule.**
- [20 minutes] **Round of introductions.**
- [60 minutes] **Panel discussion + Q&A:** Three Latin American experts in the fields of CDS and data activism will be invited to discuss various provocations in these areas.

[10 minutes] **Break.**

[30 minutes] **Breakout discussion:** Participants will be divided into small teams to discuss a set of questions regarding challenges and opportunities for data and data practices.

[40 minutes] **Designing a collaborative manifesto in “zine” format:** In breakout groups, participants will create a manifesto addressing knowledge-related challenges/controversies around data and data practices in Latin America.

[10 minutes] **Break.**

[40 minutes] **Plenum presentations:** Each group will present and discuss their ideas for the manifesto.

[20 minutes] **Closing discussion and remarks.**

3.3 Post-Workshop Plans and Expected Outcomes

We expect participants to come out of the workshop with a broader view on data practices and knowledge production enriched by debates and perspectives about and from Latin America. Before the workshop, we will invite participants to help build a collaborative *Biblioteca desde y para el sur* (library with materials from the South) on data and data practices and to join a directory of practitioners and scholars working on this area. During the workshop we aim to start drafting a manifesto for collaboration between critical data scholars and data activists. These resources will be made available on the workshop website.

Interested workshop participants will be invited to collaborate on advancing the manifesto and publish it in Spanish and English

3.4 Accessibility

The workshop will be hosted online using Zoom. Timings will be designed to limit the time participants must spend online, both to reduce fatigue and enable a global audience throughout various time zones. The workshop will be held in Spanish and we will provide interpretation and translation into English as needed before, during, and after the workshop.

We also have funding to accommodate other accessibility-related needs. When submitting their application, participants will be invited to specify accessibility-related requests to be taken into account by the organisers. These requests may include “data grants” that support those participants with limited access to internet connection during the conference or a subsidy to support childcare during the workshop. For blind or visually impaired persons we will provide alt text to all the images and very thorough descriptions of what is going on and the people that are speaking. For deaf or hearing impaired persons, we will provide captions.

4 CALL FOR PARTICIPATION

This online workshop proposes a space for Latin American academics and activists studying and engaging with data to discuss legitimacy and power in knowledge production. To break with hegemonic perspectives on data, this workshop sets the spotlight on Latin America and places activist and academic knowledge on equal standing. By hosting the workshop in Spanish (with English interpretation), we aim to create a space where Latin American voices are heard and appreciated without requiring English proficiency

from speakers and participants. We invite the CHI community to cross the borders and join a different conversation. We will host panels and interactive sessions that will inspire — and challenge — current thinking around data and data practices.

The workshop will include synchronous and asynchronous activities. The synchronous session will run over one day, for up to four hours. We invite data activists, practitioners, and researchers. **We welcome anyone’s participation regardless of Spanish proficiency. We will provide interpretation and translation support in English and Spanish as needed before, during, and after the workshop.** To participate, please use the form on our website to submit a brief outline of your work with data within activism and/or academia. We ask applicants to reflect on their positionality while answering the following questions: Where and how do you engage with data? What projects are you involved in? Who are your partners?

Submissions will be published, with participants’ permission, as part of a collaborative directory of data activists and researchers from and about Latin America.

Spanish Version: Este taller, a llevarse a cabo online, propone un espacio para que académicxs y activistas latinoamericanxs que estudian y trabajan con datos discutan cuestiones de legitimidad y poder en la producción de conocimiento. Para romper con las perspectivas hegemónicas sobre los datos, este taller pone el foco en América Latina y coloca el conocimiento activista y académico en igualdad de condiciones. Invitamos a activistxs de datos, profesionales e investigadorxs de o que trabajan en América Latina. Al organizar el taller en español (con interpretación en inglés), pretendemos crear un espacio en el que se escuchen y aprecien las voces latinoamericanas sin exigir el dominio del inglés a lxs ponentes y participantes. Invitamos a la comunidad de CHI a cruzar las fronteras y unirse a una conversación diferente. Organizaremos paneles y sesiones interactivas que inspirarán ideas en torno a los datos y las prácticas de datos.

El taller incluirá actividades sincrónicas y asincrónicas. La sesión sincrónica se desarrollará durante un día, con una duración máxima de cuatro horas. El dominio del inglés no es un requisito para participar. Habrá interpretación y traducción español-inglés para ayudar y facilitar la comunicación a través de las barreras lingüísticas antes, durante y después del taller. Para expresar tu interés, por favor, utiliza el formulario en nuestro sitio web para enviar un breve resumen de tu trabajo con o sobre datos dentro del activismo y / o la academia. Pedimos a lxs solicitantes que reflexionen sobre su posición y que respondan a las siguientes preguntas: ¿Dónde y cómo te relacionas con los datos? ¿En qué proyectos participas? ¿Quiénes son tus colaboradores?

Los textos recibidos serán publicados, con el permiso de lxs participantes, como parte de un directorio colaborativo de activistas de datos e investigadorxs de y sobre América Latina.

Más información en nuestro sitio web: <https://sites.google.com/view/cruzardatos-crossingdata>

5 ORGANISERS

The organisers of this workshop are an interdisciplinary group of Latin American female scholars and activists, engaging with data from the borderlands of disciplines, practices, migrations, and languages. We have come together due to a shared interest in making visible and supporting knowledge making and data practices from the South.

Adriana Alvarado Garcia is a Ph.D. candidate in Human-Centered Computing at Georgia Tech. Her research uses social media data as a proxy to understand local and situated systems of knowledge. In the past, she has partnered with national and international non-governmental organizations (NGOs) in Mexico to examine the role of organizational practices and human interpretation when NGOs use data to inform their interventions. Building on the lessons of these partnerships, Adriana is developing tools that support NGOs to use digital traces as evidence to uncover citizens' plurality of ways of knowing and doing in times of crisis by centering on community perspectives and the context of data production.

Ivana Feldfeber is a feminist activist from Buenos Aires, Argentina, currently based in Bariloche, Patagonia. Ivana holds two degrees in Education and Social Pedagogy, and she is completing a postgraduate diploma in Data Science, Machine Learning, and its Applications at the University of Córdoba, Argentina. She is the General Director of the gender data observatory DataGénero. Founded by Ivana with a group of scientists and activists from different disciplines and countries, DataGénero is the first observatory of its kind in the region to work at the intersection of gender bias, gender data, and feminism. Representing DataGénero, Ivana has hosted and attended numerous events concerning data in Latin America.

Milagros Miceli is a sociologist and a PhD candidate in the Computer Science Department at Technische Universität Berlin. She also works as a researcher at the Weizenbaum Institute for the Networked Society. Her research interrogates work practices of machine learning data production and focuses on power differentials as well as their effects on datasets and systems outputs. Milagros' work comprises ethnographic fieldwork with data annotators, collectors, and scientists from the Global South, including Latin America.

Saïde Mobayed is a researcher interested in how social phenomena are enumerated and rendered comparable across time, space and scale. She is a doctoral candidate in Sociology at the University of Cambridge where she looks at how data on femicide is being globally collected and locally contested with the use of digital tools, technologies and methods. At Cambridge, Saïde is also a research assistant at The Whistle, a project that develops digital tools to connect witnesses of human rights violations to advocacy organisations. In 2015, Saïde joined the Femicide Team at the UN Studies Association where she is currently the Femicide Watch Platform coordinator, a knowledge space that provides selected, high-quality information on the issue of femicide/feminicide.

Helena Suárez Val is an activist and social communications producer focusing on human rights and feminism. She has worked for local and international feminist and human rights organisations in UK, South Africa and Uruguay. Since 2015, she

has been collecting and caring for data about cases of femicide in Uruguay (<https://femicidiouruguay.net>). With Catherine D'Ignazio (Data+Feminism Lab at MIT) and Silvana Fumega (ILDA), she leads Data Against Femicide, a project that seeks to understand the production of femicide data and support its community of practice. She holds MAs in Gender, Media and Culture (Goldsmiths) and Social Science Research (Warwick), and is currently a doctoral candidate at the Centre for Interdisciplinary Methodologies, University of Warwick, researching the circulation of data and data visualisations of femicide in Latin America.
