DESCRIPTION OF ARTWORK

Isle of Reflections is an interactive lighting installation that can only be remotely explored via videotelephony. Viewers visit the island filled with iridescent lights and colorful reflections through Zoom, a popular web-based video communication tool. When the viewers see the lights and shadows that respond immediately to their voice through the screen, they recognize that they are interacting with a distant physical space in real-time. The viewers move between “breakout rooms”

Permission to make digital or hard copies of part or all of this work for personal or classroom use is granted without fee provided that copies are not made or distributed for profit or commercial advantage and that copies bear this notice and the full citation on the first page. Copyrights for third-party components of this work must be honored. For all other uses, contact the owner/author(s).

in Zoom to explore this virtual island filled with an immersive spectrum of light and color. Each room provides live scenes of the island from different viewing angles.

The installation consists of nine suspended and motorized lights placed in a box, the inside of which is covered with mirrors. Each light comprises a white LED in a dichroic film coated acrylic cylinder, containing a little water. The cylinders are each connected to stepper motors, which rotate to the sound transmitted from the viewer's side through Zoom. Whenever the iridescent lights shake, they cast ornate, undulating shadows inside the box. The louder the viewer's voice, the stronger the lights shake, resulting in ripples of overlapping shadows. This live interaction is similar to throwing pebbles on a calm water surface. The reaction to the action from a distance is immediate, simple, and beautiful.

Three live streaming web cameras are located in different places in the box, allowing the viewers to observe and interact with the remote installation from various angles. When the viewer first connects with the given Zoom link, the installation's frontal view— a translucent box illuminating the darkness— is seen on the screen. The viewer then moves into one of three breakout rooms to look inside the box. Each room provides live scenes from different perspectives: front, bottom to top, and top to bottom.

This work aims to utilize videoconferencing software— an emerging tool for non-face-to-face communications— as a new means for exhibiting and experiencing interactive art installations, particularly during this pandemic situation where physical contact and travel are problematic. *Isle of Reflections* is a real but magical island that invites people from everywhere into a reflective landscape of color and light for a poetic moment.

ARTIST INFORMATION

Chaeun Lee received a B.Sc. in Design and Human engineering from the Ulsan National Institute of Science and Technology (UNIST) in 2018 and an M.Sc. degree in Industrial Design, Korea Advanced Institute of Science and Technology (KAIST) in 2021. Her research focuses on human-computer interaction through telecommunications. <https://www.behance.net/chaeun4350eb32>

Myeongseong Kim received a B.Sc. in industrial design from the Korea Advanced Institute of Science and Technology (KAIST) in 2020 and is currently enrolled in a graduate program in Industrial Design at KAIST. His primary research interests are tangible media, digital fabrication, and interactive installations.

Hyunjung Kim Hyunjung Kim received a B.Sc. and a Ph.D. degree in industrial design from the Korea Advanced Institute of Science and Technology (KAIST) in 2006 and 2013, respectively. She is currently a research professor in the Dept. of Industrial Design at KAIST, South Korea. Her research interests reside at the intersection of design, science, and technology, focusing on new design materials and interactive spaces. <https://www.behance.net/hyunjungkeem>
