Zilvinas Naujokas, Donatas Ulvydas, Vilius Petrauskas, Mantas Pronckus, Algis Krisciunas, and Darius Zickus. 2024. Play Life. In *SIGGRAPH Asia 2024 XR (SA XR '24)*, December 03–06, 2024, Tokyo, Japan. ACM, New York, NY, USA, 1 page. <https://doi.org/10.1145/3681759.3688924>

1 SYNOPSIS

PLAY LIFE is a 30-minute immersive virtual reality film that brings to life the stunning pop art paintings of celebrated Lithuanian artist Algis Kriščiūnas. Through advanced computer graphics, the two-dimensional artworks are recreated as three-dimensional environments, immersing the viewer in a narrative-driven experience that bridges visual art and storytelling. As you journey through Kriščiūnas' vibrant and symbolic world, you witness his paintings evolve into living stories, each revealing profound emotions and timeless themes of love, relationships, and the passage of life.

2 INNOVATION

The creation of *PLAY LIFE* involved cutting-edge technology to fully bring Kriščiūnas' art into the virtual world. Using Blender for rendering, Substance Painter for texturing, and DaVinci Resolve for AI upscaling and frame interpolation, the production team reimaged two-dimensional works into immersive 360-degree environments. One of the most challenging and innovative aspects was transforming flat paintings into fully explorable 3D spaces while preserving the original artistic style and integrity. AI technologies were used to extend and extrapolate the 2D images into comprehensive virtual environments, while upscaling and frame interpolation enabled high-quality visuals with optimized production time.

3 TARGET AUDIENCE

The film is tailored for art enthusiasts, virtual reality users, and audiences seeking unique, immersive experiences that go beyond traditional viewing. It resonates with viewers who are drawn to emotionally charged narratives and visually stunning storytelling.

PLAY LIFE is also perfect for those who appreciate the intersection of art and technology, offering a deeper engagement with the artwork through the immersive capabilities of VR.

4 TECHNICAL DETAILS

PLAY LIFE is presented in a 360-degree stereo video format, compatible with a wide range of VR headsets that support 5600x5600 stereo 360 videos. This ensures maximum accessibility for the audience, allowing them to engage fully with the film's richly detailed environments and lifelike quality. The team chose not to include interactive elements, focusing instead on a non-interactive approach that allows viewers to become fully absorbed in the story and visuals without distractions.

5 CONTRIBUTION TO THE VR FIELD

PLAY LIFE is a groundbreaking project that redefines how art can be experienced. It brings traditional art into the immersive digital realm, transforming passive viewing into an active, emotional journey. By blending visual art with virtual reality, the film creates a new avenue for audiences to engage with both the art and the story behind it. This experience represents a significant step forward in the realm of immersive media, offering a unique model for how VR can be used to create a deeper connection between the viewer and the artwork. *PLAY LIFE* illustrates how technology can be seamlessly integrated into artistic expression, expanding the possibilities of both virtual reality and modern art.
