ABSTRACT

Human-Computer Interaction and the Arts have a relatively recent history, but computers have opened the world to new forms of expression and wide audiences. The way in which we think of art has changed, from webcomics and digital painting to AI-generated imagery and NFTs. However, these changes have also caused tension, and a disparity between what art is, and how it reconciles with research. This workshop aims to bring together artists and researchers to explore the current worldview of HCI and Art and speculate as to its possible, plausible, and probable futures, via discussion, collaboration, and the formation of new expressive artworks, objects, and performances. Through this process, we will also create a roadmap for a common future and imagine new ways of sharing this dual practice with the SIGCHI community and beyond.

CCS CONCEPTS

• **Human-centered computing** → **Human computer interaction (HCI)**.

KEYWORDS

Art, sketching, dance, photography, craft, making, sewing, painting, comics, drawing, design fiction, futuring

ACM Reference Format:

Makayla Lewis, Miriam Sturdee, Thuong Hoang, Sarah Fdili alaoui, Angelika Strohmayer, and Mafalda Samuelsson-Gamboa. 2023. Futuring (CHI)Art: Building a Collective Common Future. In *Extended Abstracts of the 2023 CHI Conference on Human Factors in Computing Systems (CHI EA '23)*, April 23–28, 2023, Hamburg, Germany. ACM, New York, NY, USA, 5 pages. <https://doi.org/10.1145/3544549.3573791>

1 BACKGROUND

We are more than the sum of our education, research, and industrial experience. We are explorers, thinkers, and innovators, and we create new ways of seeing and interacting with the world. Human-Computer Interaction is a field that embraces this humanity, but

HCI as we know it is changing. The days of dusty volumes on library shelves are gone, and the digital domain has allowed us to expand our reach, and our research vision, but this vision has largely focused on existing tropes of textual publication. However, things are moving forwards, and as artists and researchers, we are at the forefront of reimagining our field. Conferences are beginning to recognize the importance of alternative formats, the pictorial [18], the critique [5], and possibly even the fully interactive, perpetual research experience [19]. There is more to research than output however, art tells us to focus on process and meaning. The continued development of the research space has much in common with Design Fiction "We are telling worlds, not stories" [6]. Art will be a vital part of telling these worlds. What will art become within the HCI space? How will these two reconcile [26], or challenge each other [4]? This workshop aims to explore future visions of art and HCI, including conversations, collaborations, explorations, and outputs.

1.1 State of CHI(Art)

The State of CHI(Art) at CHI 2022 [24] brought together like-minded and creative individuals from HCI, computer science, and other related fields across the world (Figure 1, left). The workshop was brimming with creativity and excitement from the onset, with a variety of viewpoints, creative expressions, and in-depth discussions. The core outputs from the workshop was an online Miro Exhibition which was accessible to all CHI'2022 conference attendees (Figure 1, right); and the development and publication of a (CHI)Art book detailing submissions and creative practices which will be published online prior to this workshop via the workshop website www.stateofchiart.wordpress.com/.

1.2 Futuring CHI(Art) – Building a Common Collective Future

'Futuring' is thinking ahead, an exploration of the future [13, 27]. Futuring can take on many meanings, but in this case, it is preparedness and imagination, which will be supported by existing practices of looking forward. The Futuring CHI(Art) workshop at CHI 2023 will use methods such as Speculative Sketching and Design Fiction, blending these practices with design thinking and user experience design. The broad aims of the work are therefore to explore what will Art and Human-Computer Interaction (HCI) become, and what can we do to promote and enhance its trajectory? By putting in place plans, actions, and practices that support the

Permission to make digital or hard copies of part or all of this work for personal or classroom use is granted without fee provided that copies are not made or distributed for profit or commercial advantage and that copies bear this notice and the full citation on the first page. Copyrights for third-party components of this work must be honored. For all other uses, contact the owner/author(s).

arts in HCI, we can create communities and working groups that come together to support research, education, and industry. The Futuring CHI(Art) workshop will envision future scenarios which can be drawn, illustrated, made, or performed.

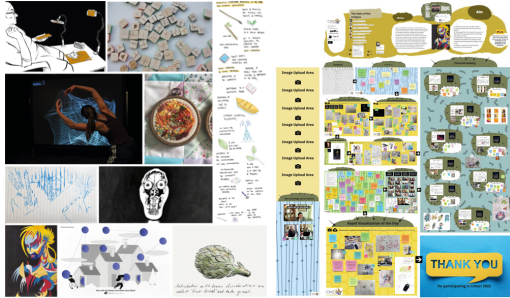

Figure 1: State of CHI(Art) at CHI 2022: (left) Gallery of author arts in HCI practices [7]; (right) Workshop Miro board www.miro.com/app/board/uXjVO9dR5UE=/?share_link_id=555367864238

2 ORGANIZERS

The organizers all have an active interest in the intersection of art and HCI, and are drawn from a range of career levels, expertise, and artistic practices (see Figure 2). By encouraging diversity in how we view art, we hope to also encourage a range of potential participants to join us for this workshop.

Makayla Lewis is a Lecturer in Computer Science (User Experience Design) at Kingston University London, researching and teaching human factors in business, cybersecurity, smart money, and AI. Makayla is an accomplished visual thinker and sketcher who researches sketching in HCI, e.g. [14–17] and organizes sketching events and courses and provides visuals for international companies and conferences.¹

Miriam Sturdee is a Lecturer at the University of St Andrews in Scotland, working on intersections of art, design, and computer science. She is a practicing artist and designer and has an MFA in Visual Communication. Her publications explore areas of Futuring, sketching, and drawing, and most recently, psychology, [22, 23, 25].

Thuong Hoang is an Associate Professor in Emerging Technologies at Deakin University, Australia. His research expertise focuses on designing, implementing, and evaluating interactive systems that leverage emerging virtual and augmented reality infrastructures and technologies. In his work, he often applies human factors, user experience, and interaction design principles to produce engaging, interactive, and novel experiences, especially in manufacturing [12], exhibitions [11], education [7], and health [1].

Sarah Fdili Alaoui is an Associate Professor at the University of Paris Saclay. She is a dance artist, choreographer, dancer, and Laban Movement Analyst. Sarah is interested in intersecting research in interaction design with dance-making and choreography. She has been involved in many art and science projects, collaborating with dancers, visual artists, computer scientists, and designers to create interactive dance performances, and interactive installations, as

well as systems for supporting choreography and dance learning and documentation.

Angelika Strohmayr is an Assistant Professor at Northumbria University’s School of Design and co-leader of the Design Feminisms Research Group. Through participatory craft practices, she explores the relationship between digitally augmented craft, trauma-responsive design, safety, and social justice, e.g. [21, 24, 26]. She works primarily with groups who are made marginal, experience stigmatization or criminalization or have experienced different forms of trauma. Together, they explore notions of care, critical hope, and solidarity through making and thinking together.

Mafalda Gamboa is a Ph.D. student at the Chalmers University of Technology with a background in Architecture, working on incorporating design knowledge in human-robot interaction. Her own work is grounded on exploring sketching and art [24], through different lenses and tenses including autoethnography [9], metaphor-making [2], and VR [3]. She has often illustrated other people’s research practices.

3 WEBSITE

The website www.stateofchiart.wordpress.com/futuringchiart/ will be utilized both prior to and after the workshop as a resource for information and accepted pictorials relating to the workshop themes, as well as being used to promote the workshop and host the Call for Participation (CfP). It will also be used to summarize after the workshop has taken place and will be maintained after the conference. The website is built with accessibility in mind and is usable with screen readers.

4 PRE-WORKSHOP PLANS

Similar to successful State of CHI(Art) workshop [24], we will make a Miro, online whiteboard, available two weeks prior to the event and give each participant their own space to create a mini visual biography of their arts practice. These spaces will create a starting point for conversations during the workshop. Instructions and kit requirements for all activities will be communicated in advance via email for both in-person and remote participation. We also plan to engage with a wider audience through the SIGCHI Discord channel and make a thematic channel as #CHIart. This will also correspond to a Twitter and Instagram hashtag which the organizers will populate with content in the weeks running up to the conference and workshop date. We will utilize the SIGCHI social media handles to run a fun campaign asking those following to make art on a sticky note and post it using both the #CHI2023 and #CHIart hashtags.

5 HYBRID WORKSHOP

Futuring CHI(Art) will be a one-day hybrid workshop of introductory activities and design challenge identification that will allow for two hybrid work streams: online and remote. Each stream will be supported by in-person and remote facilitators. A slack channel will be used to support on-the-day communication amongst facilitators. A design sprint approach [23] adapted to the Double Diamond [24] will be followed to allow the facilitators and attendees to design the future of CHI(Art) (Figure 3). The two workstreams will be frequently brought together, facilitated by the organizers, using the conference platform, with Miro used to share online and in-person

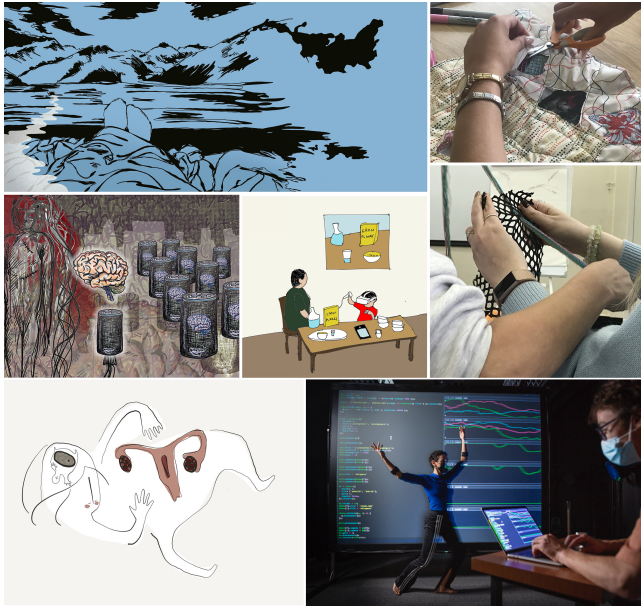

Figure 2: Organizer's arts in HCI practices. Top left: *Disconnected*, Digital Illustration by Makayla Lewis, 2022, an extract from [25]. Top right: Photographs from a workshop in collaboration with Changing Lives' women's criminal justice hubs in the UK, the making of a 'monster', showing how collaborative craft processes can shape our understanding of safety, and the lower image shows a woman using the reverse appliqué technique to cut into a small quilted piece made up of many layers of fabric, Angelika Strohmayer, 2022. Middle left: *Could you download your brain to an Alexa?* Mixed media illustration, Miriam Sturdee [25]. Middle: *Do we know if children perceive virtual food portion the same as physical food?* Digital Illustration by Thuong Hoang, 2022. Bottom left: *The body of a woman, in thoughts of egg donation.* This drawing was part of a submission to a NordiCHI workshop on speculations on feminist reproductive health technologies [20], Mafalda Gamboa, 2022. Bottom right: Image from *CO/DA*, an improvisation practice involving dance, live coding and movement sonification, Jules Françoise, Sarah Fdili Alaoui, & Yves Candau [8]; photograph ©Christian MOREL / LISN / CNRS Photothèque

creative outputs, to discuss and Show+Tell. Towards the end of the workshop, each stream will be given the opportunity to present to the other workstream their creative future outputs, share critiques, and identify actions to take ideas forward verbally, this will be recorded by the facilitations on the Miro whiteboard.

6 ACCESSIBILITY

The workshop will be designed and delivered to be attended by as many people as possible. All text and verbal utterances will be clear, simple to understand, and in English. All shared imagery will contain Alt Text or Alt Narrative [17] with appropriate color contrast. Remote attendees will have access to the conference platform

closed captioning, additionally, microphones and webcams will be used to support communication between in-person and remote attendees. The Miro platform will be set to allow for zooming in up to 300% without problems, keyboard navigation will also be supported. Opportunities for support, questions, and comments will be present throughout the workshop regardless of in-person or online delivery.

7 ASYNCHRONOUS ENGAGEMENT

The online whiteboard platform, Miro, to support show and tell, and slack channel, to support communication, will be offered to participants if technical or accessible issues were to arise. These online spaces will be shared with all attendees two weeks before the workshop.

8 WORKSHOP STRUCTURE

The workshop will take place in a hybrid manner to support in-person and remote attendance (Figure 3). The workshop will be structured to take place over the course of one day during the CHI 2023 conference. Suggested Keynote speakers will be approached after acceptance. Lunch and morning/afternoon breaks will be factored into the program once the timings and format of the workshop are known.

Figure 3: Futuring CHI(Art) hybrid workshop design sprint plan

- (1) Pre-Workshop: Early arrivals will be encouraged to network.
- (2) Welcome & Introduction: Conveners and participants will introduce themselves and give short presentations of their arts in CHI work/research. (15 minutes)
- (3) Icebreaker 'Self Portraits': Participants will be asked to think of their favorite or recent technology they have used and create an artifact that expresses how they and other users interact with it, their attitudes toward it, and their emotional connection to it. (15 minutes)
- (4) Morning Keynote & Artistic Responses: Invited speaker either in person or remotely to discuss the importance of imagery to tell compelling stories without the need for text. All participants will be asked to create an artistic response to the speaker e.g., a sketch, painting, dance, made object, etc. Artistic Responses Show & Tell: Participants and organizers share sketches using other forms of response to the keynote speaker's presentation. Miro will be used to share artifacts with remote attendees. (15 minutes)

- (5) Artistic Responses Show & Tell: Participants and organizers share sketches using and other forms of response to the keynote speaker's presentation. Miro will be used to share artefacts with remote attendees. (20 minutes)
- (6) Design Challenges: Participants and conveners will be asked to speculate on futures of Art in CHI, both in terms of methods, and practices and in terms of practical support systems that would allow the community to enrich its presence at CHI. For example, this could include a revival of the CHI Exhibition, or alternative publication formats. (15 minutes)
- (7) Design Sprint: Participants and conveners will be divided into two design challenge streams: online and offline. A design sprint approach will be followed (see Figure 3) that will be led by facilitators in each stream. Those remote will be provided with materials to inspire creativity via Miro. Attendees will have access to the Miro board and will be provided with instructions and a list of materials prior to the workshop. Each workstream will be guided through the design sprint activities. (80 minutes)
Discover: Sharing of attendees' pictorials, artworks, or critique followed by a creation of a CHI(Art) persona using an empathy map template [10].
Define: Defining the focus of the design challenge using Draw or Act the Problem, "How Might We?" Questions followed by Rapid Idea Generation.
Develop: Artistic mockups (visuals, performance, sound, etc.) that explore and question the future of CHI(Art). Followed by the creation of a storyboard to depict the moments and or actions leading to the opportunity (mockup), the experiences and feelings when interacting with the opportunity, and what follows.
Deliver: Completion of a Roadmap for CHI(Art) innovation based on [25] template.
- (8) Critique and Planning: Participants and conveners will be asked to present their mockup and roadmap for their design challenge. Followed by a constructive critique by other attendees using their preferred art practice. This will conclude with the identification of action points to take their idea forward post-workshop (20 minutes)
- (9) Closing statements: Closing statements by the organizers. (10 minutes).

9 POST WORKSHOP PLANS

Participants' collection of sketches can be collated into a unified form for submission to other venues, such as Alt.CHI or video submission. Various activities within the workshop program such as artistic responses together with keynote materials can be curated into a video format or other types of interactive artifacts (interactive webpage, pictorials) for submission to CHI-related venues (ACM DIS, Alt.CHI). Discussion on alternative venues could be embedded in the workshop activities. Additional transitional sketches could be created by workshop participants afterward to make these videos. Interactions with AI-generated arts are another possibility to collate workshop materials into an engaging post-workshop project. Arts practices should have better opportunities to contribute to the CHI communities.

10 CALL FOR PARTICIPATION

- Are you an artist and an HCI researcher?
- Do you incorporate art practice into your research, or does your research inspire your art practice?
- Would you like to help shape the future of Arts in HCI?

We explore these questions and more in our hybrid 'Futuring (CHI)Arts' workshop! Together, we will unpick the tensions and joys, pitfalls, and potentials of artistic, crafted, and visual thinking for the CHI community. How might we celebrate, appreciate, and work towards new formats in bringing together arts practice and research, publishing formats, and working with non-academic partners? We invite you to join us for a one-day interactive workshop on 'Futuring (CHI)Arts', designed to capture, celebrate, and explore arts and HCI practices and outputs at CHI and associated conferences.

Potential participants should submit one of the following two options:

- A 4-6 page position paper on the topic of 'arts practice and HCI' in a pictorial format – that is, the ACM paper format that celebrates images, sketches, illustrations, photos, and other made outputs over written text. This submission should use the recent pictorial template from Creativity & Cognition www.cc.acm.org/2023/pictorials/.
- A 1-page critique position paper that provides a critical and insightful critique of 'art practice and HCI'. This submission should use the recent template from NordiCHI's Critiques www.conferences.au.dk/nordichi2022/submit/critiques.

Position papers should be submitted via EasyChair. Submissions will be selected based on appropriateness for the call, content, and potential engagement with the core values of the workshop. Selection will be juried by the workshop organizers, who have extensive experience and knowledge relating to the area. It is mandatory that for each accepted submission at least one person will attend the workshop. More details are available at: www.stateofchiart.wordpress.com/futuringchiart/

10.1 Submission Details

Pictorial Format: Pictorials should be at least 80% imagery, it is suggested only the first and last page contain text e.g., introduction, brief background, and references. The in-between pages should be imagery with little to limited text, captions are optional. Please ensure all images have AltText and that "Enable Accessibility and Reflow with tagged Adobe PDF" is checked when you create your PDF file.

Critique Format: Critiques should be at least 80% imagery, it is suggested only the abstract contain text, e.g., abstract, image of art practice, and caption. Work should critically dissect, provoke, or inspire.

Authors are required to be sure that they produce accessible work. Please ensure all images have AltText and that "Enable Accessibility and Reflow with tagged Adobe PDF" is checked when you create your PDF file.

Participant Selection Criteria: Submissions will be selected based on appropriateness for the call, content, and potential engagement with the core values of the workshop. Selection will be

juried by the workshop organizers, who have extensive experience and knowledge relating to the area.

Workshop Format: Hybrid (remote and in person attendance supported) Accepted pictorials and critiques: accepted submissions will be curated and hosted on the workshop website. Participant outputs from the workshop will be digitalized and added to the workshop website.

Important dates:

- Pictorial Submission Deadline: 23 February, 2023, via Author 1.
- Notifications: 14 March, 2023
- Camera ready submission: 30 March, 2023
- Workshop Date and Time: Between 23-28 April, 2023
- Deadlines are specified as Anywhere on Earth time
- The submission site will open on: 9 January, 2022

Workshop Accessibility Statement The workshop will be designed and delivered to be attended by as many people as possible. All text and verbal utterances will be clear, simple to understand, and in English. All shared imagery will contain Alt Text with appropriate color contrast. Remote attendees will have access to the conference platform closed captioning, additionally, microphones and webcams will be used to support communication between in-person and remote attendees. The Miro platform will be set to allow for zooming in up to 300% without problems, keyboard navigation will also be supported. Opportunities for support, questions, and comments will be present throughout the workshop regardless of in-person or online delivery
