ABSTRACT

M10H (Missing 10 Hours) is a narrative VR project directed by Fanni Fazakas. In the multi-ending experience, the user is embodied as the bystander (the buddy of the perpetrator), who can influence the narrative. By consulting with psychologists and experts, we made sure that the experience is ethically correct and has a measurable impact. In the experience, users can explore a similar night to that of a real-life victim of GHB, the 'date rape drug' from the Bystander's perspective. Multiple interactive gameplay elements

will allow the user to influence how the story evolves and gain a multi-perspective understanding of the issue. After onboarding, the bystander can explore real-life scenarios where a "pal" called Greg puts GHB into a drink that belongs to their common friend, a young woman called Mara. Since GHB makes it impossible for Mara to defend herself, or even to ask for help, the only possibility is that the user will recognize what happens and save her from Greg and his questionable intentions. During the multi-ending storyline, the user has to think, react and challenge themselves.
